

Release Script — Hummingbird DM™ 5.0-5.1

Product Integration

Ascent Capture® provides an out-of-the-box capture solution for Hummingbird DM's document management platform. Ascent Capture's tight integration provides DM users access to a comprehensive production capture solution, including document, data and Internet-based distributed capture. Documents can also be released directly into the Hummingbird Records Management Solution.

Document Settings Tab

The Document Settings tab provides a list of the available DM profiles for the logged in library. Once the user selects a profile for released documents, the DM profile attributes associated with the selected profile are populated. Linking is as simple as pointing and clicking.

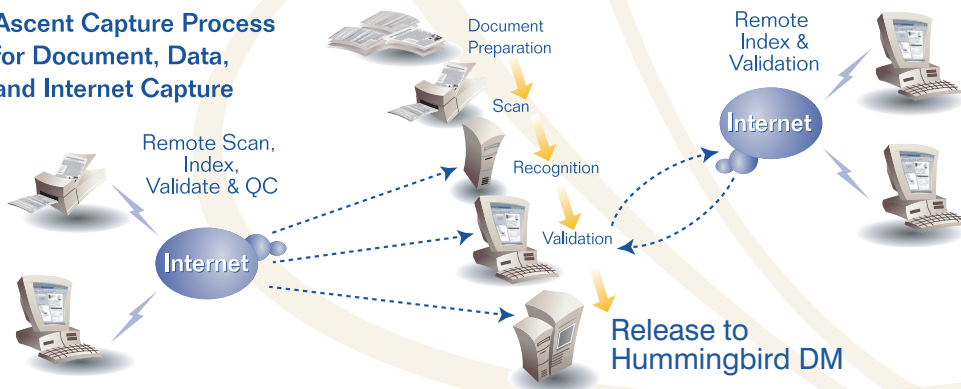

Easy Release Setup

The Ascent Capture release module consists of five simple tabs to allow quick configuration of release features. The administrator selects the desired DM profile, links Ascent Values to profile attributes, specifies the storage location, determines security settings and versioning options, and selects an image format. Once the release script is set up and the batch classes are published, the user can begin capturing and releasing batches.

Unattended Release

The Ascent Capture release module runs unattended on a Windows workstation and can be configured for automated release during off hours to avoid impacting the network.

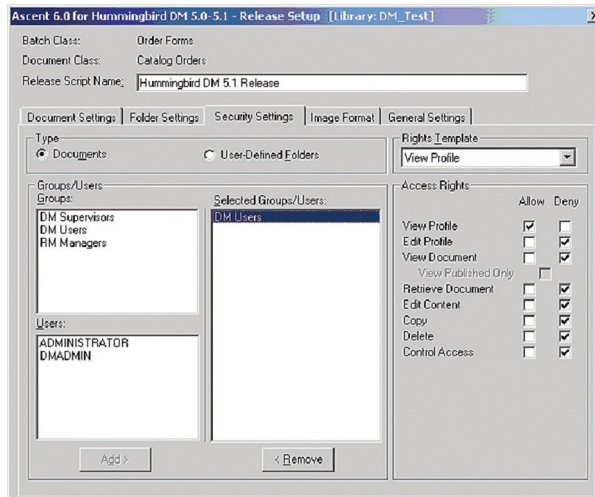

Ascent Capture Process for Document, Data, and Internet Capture

The Operating System of Capture

Primary Features

- Automatic release of documents and data into DM
- Ability to link Ascent Values to DM profile and folder properties for indexing and retrieval
- Ability to dynamically define new folders for released documents
